1. Introduction

1.1 Purpose of the Minerals and Waste Joint Plan Habitats Regulations Assessment

North Yorkshire County Council (NYCC), the City of York Council (CYC) and the North York Moors National Park Authority (NYMNP) are working together to produce a Minerals and Waste Joint Local Plan. The purpose of this report is to record and present the findings of a Habitats Regulations Assessment (HRA) undertaken on that Joint Plan. This exercise was also undertaken at the Issues and Options and Preferred Options stages and earlier versions of the HRA report can be viewed [here](#). This report has been carried out to meet the requirements of the 'Conservation of Habitats and Species Regulations, 2010' and provides the competent authorities (in this case NYCC, CYC and NYMNP) with the information required to establish whether the draft policies and sites presented in the Joint Plan are compliant with the Regulations.

1.2 Requirement to Undertake Habitats Regulations Assessment

The Habitats Directive

The United Kingdom is subject to Council Directive 92/43/EEC on the Conservation of Natural Habitats and Wild Fauna and Flora, which is often referred to as the Habitats Directive. The principal aim of the Directive is to promote biodiversity *'by requiring Member States to take measures to maintain or restore natural habitats and wild species listed in the Annexes to the Directive at a favourable conservation status'* (JNCC, 2012a)¹. Amongst the measures the Directive requires to achieve this is the creation of *'a coherent European ecological network of special areas of conservation'*. This network also includes Special Protection Areas (SPAs) for birds, designated under Directive 79/409/EEC ('The Birds Directive') and is termed the Natura 2000 Network.

Article 6(3) of the Directive puts in place requirements on certain plans and projects:

*'Any plan or project not directly connected with or necessary to the management of the site but likely to have a significant effect thereon, either individually or in combination with other plans or projects, shall be subject to **appropriate assessment** of its implications for the site in view of the site's conservation objectives'*. (European Commission, 1992)².

The Conservation of Habitats and Species Regulations, 2010 (As Amended)

The Habitats Directive was transposed into UK law in 1994 as the Conservation (Natural Habitats &c) Regulations, 1994. These Regulations were amended on a number of occasions in the years following 1994 and in 2010 the Government chose to consolidate the various amendments to the Regulations via 'the Conservation of Habitats and Species Regulations, 2010'. Paragraph 61 sets out the requirements for the undertaking of appropriate assessment where a plan *'is likely to have a significant effect on a European Site or a European Offshore Marine Site (either alone or in combination with other plans or projects)'*.

¹jncc.defra.gov.uk/page-1374

²European Commission, 1992. Council Directive 92/43/EEC of 21 May 1992 on the conservation of natural habitats and of wild fauna and flora [<http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=CELEX:31992L0043:EN:HTML>] (accessed 07/02/2014).

The Regulations also provide clarity on what is meant by ‘European Site’ under Regulation 8. This includes both terrestrial and marine Special Protection Areas (SPAs), Special Areas of Conservation (SACs), Sites of Community Importance (SCIs)³ potential SACs (pSACs) and potential SPAs (pSPAs).

The Conservation of Habitats and Species (Amendment) Regulations 2012 update the 2010 Regulations. While this legislation makes significant changes to the implementation of the Birds Directive in the UK, including a requirement for competent authorities to avoid pollution or deterioration of bird habitat wherever it may occur⁴, the protocols for undertaking Appropriate Assessment, at least in terms of the Joint Plan, remain the same.

1.3 Minerals and Waste Joint Local Plan

As planning authorities for minerals and waste in each of their areas, NYCC, CYC and the NYMNP have a responsibility to take decisions on planning applications for these types of development. The three Authorities also have a duty to produce planning policies within a Local Plan to help take those decisions.

NYCC, CYC and the NYMNP are currently working together to prepare a Minerals and Waste Joint Local Plan which will be prepared under the provisions of the Town and Country Planning (Local Planning) Regulations 2012⁵. The Joint Plan, informed by evidence and consultation, contains the spatial framework for future minerals and waste development across the three authorities and present land use policies and allocations for future minerals and waste development.

The Joint Plan is currently at the Publication stage of preparation.

Table 1 below shows the key stages in the production of the Joint Plan.

Table 1: Key Stages in the Production of the Joint Plan

Stage in plan preparation	Purpose
First Consultation (undertaken in Summer 2013)	To obtain views on the issues the Plan should address
Issues and Options (undertaken in late winter 2014)	To present, for consultation, the issues, draft vision and objectives and possible options for policies to address the issues
Preferred Options (undertaken in late Autumn 2015)	To present draft policies for consultation
Publication	To publish the Plan for representations on soundness
Submission and Examination	Independent examination and production of

³ SCIs are sites that have been adopted by the European Commission but are not yet formally designated by the European Commission.

⁴ This requirement will be addressed, where it exists outside of the Natura 2000 / Ramsar network, in the accompanying Sustainability Appraisal to the Joint Plan.

⁵ These Regulations build upon the broader system for producing plans set out in the 2004 Planning and Compulsory Purchase Act. For instance, the arrangements for Development Plan Documents are amended and those DPDs are renamed as Local Plans.

	Inspector's report
Adoption	Final Plan adopted by the three authorities

A vision and objectives have been developed in order to give direction to the policies of the Joint Plan. The vision and 12 related objectives which have been proposed as a means of taking the vision forward are underpinned by the following interconnected priorities:

- Delivering sustainable waste management;
- Achieving the efficient use of minerals resources;
- Optimising the spatial distribution of minerals and waste development; and
- Protecting and enhancing the environment and supporting communities and businesses and mitigating and adapting to climate change.

The full vision and objectives can be viewed in the Publication version of the Plan available at www.northyorks.gov.uk/mwconsult.

The Joint Plan policies are presented in 5 chapters in the Joint Plan as follows:

- Minerals;
- Provision of Waste Management Capacity and Infrastructure;
- Minerals and Waste Transport and Other Infrastructure;
- Minerals and Waste Safeguarding; and
- Development Management.

A full list of preferred policies as well as the policies themselves is available in the [Publication version of the Plan](#). **THIS ASSESSMENT OF LIKELY SIGNIFICANT EFFECTS REPORT SHOULD BE READ ALONGSIDE THE PUBLICATION PLAN.**

A Sustainability Appraisal (SA), incorporating the requirements of Strategic Environmental Assessment (SEA), has also been undertaken in relation to the Joint Plan and the Sustainability Appraisal Report relating to the Publication version of the Plan consultation can be viewed at www.northyorks.gov.uk/mwconsult. However, as outlined above, there is also a requirement under European and UK legislation to undertake a Habitats Regulations Assessment on the plan. While SEA is an iterative process that seeks to improve the environmental performance of a plan and reduce or mitigate for any deleterious environmental effects, Habitats Regulations Assessment is a test of the effect of the plan on the integrity of European Nature Conservation Sites (referred to from this point on as 'European sites')⁶. In this sense the objective of the Habitats Regulations Assessment process undertaken in this report is to test whether the Joint Plan is likely to have a significant effect on European Nature Conservation Sites either alone or in combination with other plans or projects and, if so, can that effect be reduced to levels that are below a significant level. This report also describes any avoidance measures or mitigation that could be pursued at an early stage and states whether further appropriate assessment⁷ under the Regulations is likely to be necessary.

⁶ In this report European Nature Conservation Sites, namely Special Protection Areas and Special Areas of Conservation, are considered alongside international Ramsar Wetland Sites, consistent with UK Government Policy.

⁷ See section 2 of this report for an explanation of appropriate assessment.

2. Habitats Regulations Assessment Methodology

2.1 European Sites

As previously stated, plans such as the Joint Plan must be considered for their likely significant effects (alone or in combination with other plans and projects) on European Sites. The Conservation of Habitats and Species Regulations, 2010 (as amended) establishes what is meant by a 'European Site' under Regulation 8. This includes both terrestrial and marine Special Protection Areas (SPAs), Special Areas of Conservation (SACs), Sites of Community Importance (SCIs)⁸, potential SACs (pSACs) and potential SPAs (pSPAs). These are described below:

Special Protection Areas (SPAs) are '*strictly protected sites classified in accordance with Article 4 of the EC Birds Directive, which came into force in April 1979. They are classified for rare and vulnerable birds (as listed on Annex I of the Directive), and for regularly occurring migratory species*'⁹.

Special Areas of Conservation (SACs) are '*strictly protected sites designated under the EC Habitats Directive. Article 3 of the Habitats Directive requires the establishment of a European network of important high quality conservation sites that will make a significant contribution to conserving the 189 habitat types and 788 species identified in Annex I and II of the Directive (as amended)*'¹⁰.

Potential SACs (pSACs) and potential SPAs (pSPAs) are sites that have been approved by Government and are currently in the process of being classified¹¹.

Consideration of Ramsar Sites and Other Sites

Unlike European sites, Ramsar sites are sites of international, rather than just European, importance, designated for wetlands. In practice, in the UK most Ramsar sites also receive protection as Special Protection Areas. However, paragraph 118 of the Government's National Planning Policy Framework gives Ramsar sites and proposed Ramsar sites the same protection as European sites. The NPPF also states that potential SACs (pSACs), pSPAs and 'sites identified, or required as *compensatory measures for adverse effects on European sites*' should be given the same protection as European sites. To address this requirement of planning policy all Ramsar sites, where they lie within the Plan Area or a 15km buffer zone applied around its external borders (see Section 3.2), will be considered alongside European sites, terrestrial or marine, in this assessment.

⁸SCIs are sites that have been adopted by the European Commission but are not yet formally designated by the European Commission.

⁹JNCC, undated. Special Protection Areas (Available at: jncc.defra.gov.uk/page-162 [Accessed 07/02/2014]).

¹⁰JNCC, undated. Special Areas of Conservation (Available at: jncc.defra.gov.uk/page-23 [Accessed 07/02/2014]).

¹¹JNCC, undated. Special Protection Areas (Available at: jncc.defra.gov.uk/page-162 [Accessed 07/02/2014]).

At the time of writing there are a number of Ramsar sites within 15km of the study area (see Figure 4).

As previously mentioned, for reasons of brevity, when this report refers to European sites, Ramsar sites are included in that definition.

2.2 A Staged Approach to Appropriate Assessment: Habitats Regulations Assessment

The Habitats Regulations refer to the undertaking of ‘appropriate assessment’ in relation to plans and projects. However, in practice many organisations have addressed the requirement to undertake appropriate assessment via a series of steps. For instance, it is necessary to first determine the extent to which plans require appropriate assessment before the assessment can practicably proceed, and to do this it is necessary to assess whether significant effects on European sites are likely and to establish what the ‘appropriate assessment’ itself should focus on. Following this an appropriate assessment report may be drafted that considers the effects of the plan on the integrity of European sites. In some cases, where no alternative solutions can be found, it will be necessary to undertake further work to identify the extent to which a plan should proceed because of imperative reasons of overriding public interest.

Since the ‘appropriate assessment’ proper is a discreet stage of a potentially multi-staged process, to avoid confusion the process as a whole is usually referred to as Habitats Regulations Assessment.

In this assessment we have divided the full Habitats Regulations Assessment process, including Appropriate Assessment, into 4 key stages, as illustrated in Table 2, below. This report documents the undertaking of Stages 1 and 2 of this Habitats Regulations Assessment process. It also undertakes part 3 in so far as it is relevant to removing uncertainties over the significant effects of policies and sites identified at earlier stages of the assessment process.

Table 2: Habitats Regulations Assessment: Key Stages

Stage 1		Progress
Pre Screening and Scoping	<ul style="list-style-type: none"> A. Identify whether the plan is subject to Habitats Regulations Assessment. B. Identify international sites in and around the plan area. C. Identify the conservation objectives and threats to site integrity of European sites. D. Establish the methodology for undertaking the Assessment. 	Undertaken in this Likely Significant Effects report (and previously in the Issues and Options Likely Significant Effects report).
Stage 2		

<p>Screening for likely significant effect</p>	<p>A. Identify potential effects on European sites and the possible way in which this might affect conservation objectives.</p> <p>B. Examine other plans and programmes that could contribute to 'in combination' effects.</p> <p>C. Make a high level assessment of whether significant effects can be ruled out by making adaptations or adjustments to the plan.</p> <p><i>If no effects are likely – report no significant effects. If effects are judged likely or any uncertainty exists – the precautionary principle applies - proceed to Stage 3.</i></p>	<p>Undertaken in this Likely Significant Effects report (and previously in the Issues and Options Likely Significant Effects report). This has been revisited at this Publication stage.</p>
<p>Stage 3</p>		
<p>Assessment under Regulation 61 of the Habitat Regulations, 2010: Appropriate Assessment</p>	<p>Consider how the elements of the plan identified as potentially having likely significant effects 'in combination' with other plans and programmes will cause direct and indirect effects on the integrity of European sites in light of their conservation objectives (the 'Appropriate Assessment'). Consider how any effects on the integrity of a site could be avoided by changes to the plan and the consideration of alternatives.</p> <p>Develop mitigation measures (including timescale and mechanisms).</p> <p>Report outcomes of Appropriate Assessment including mitigation measures, consult with Natural England, the Environment Agency and wider (public) stakeholders as necessary.</p> <ul style="list-style-type: none"> • <i>If plan will not have an adverse effect on the integrity of European sites alone or in combination with other sites (the AEol¹² decision) proceed without further reference to Habitat Regulations.</i> • <i>If effects or any uncertainty remains following the consideration of alternatives and development of mitigation measures, proceed to Stage 4.</i> 	<p>This has been undertaken to accompany the Publication stage and may be further updated depending on the outcome of that consultation.</p>
<p>Stage 4</p>		
<p>Procedures where adverse</p>	<p>If impacts remain, a plan or programme can only proceed provided a series of 'sequential tests'</p>	<p>Where necessary,</p>

¹² 'The AEol decision' is used in Defra's draft guidance (The Habitats and Wild Birds Directives in England and its Seas: Core Guidance for Developers, Regulators and Land/Marine Managers, 2012. Defra, London) and refers to deciding whether or not the Plan will result in 'adverse effects on integrity'.

effect on integrity of international site remains (Derogations)¹³	(Habitat Directive's article 6 (4) derogation requirements) are satisfied. These are: Test 1: There must be no feasible <u>alternative solutions</u> to the plan or project which are less damaging to European Sites; Test 2: There must be ' <u>imperative reasons of overriding public interest</u> ' (IROPI) for the plan or project to proceed; Test 3: All necessary <u>compensatory measures</u> must be secured to ensure that the overall coherence of the network of European Sites is protected.	this will be undertaken prior to submission stage.
---	--	--

2.3 Source – Pathway – Receptor Approach

A 'source-pathway-receptor' approach is often used in environmental risk management. It is a way of developing a conceptual understanding of how environmental harm can occur and this approach will be followed in this assessment in order to establish whether significant effects will occur or are likely. The broad principles of this approach are described below.

Source-Pathway-Receptor

It stands to reason that if environmental or any other form of hazard is to occur it must come from somewhere. For instance a water pollution incident wouldn't occur unless there is some source or causal agent for that pollution (e.g. agricultural run off or an industrial facility). This is the **source**.

Environmental hazards would not present any problems unless there were a **receptor**, or a place that would be vulnerable to damage, that would be damaged when exposed to whatever hazard originates from the source. So an already sterile water body would be unlikely to be significantly affected by a pollution incident, whereas a freshwater ecosystem that relies on high water quality may be significantly affected by water pollution. However, there may also be secondary environmental effects if the water body drains to a location which is sensitive to pollution.

If, however, a sump or interceptor collected the pollution before it entered the water body receptor then significant effects on any ecosystem would be unlikely to occur. This is because there is no **pathway** by which the hazard (pollution) can reach the receptor (the freshwater ecosystem).

Where the European sites are considered vulnerable to certain impacts those impacts can only be considered possible where there is a source for those impacts and a pathway to the receptor (the European site or species associated with it).

¹³ A derogation is a provision that often features in EU legislation that allows part or all of a legal measure to be applied differently or not at all. In the case of the Habitats Directive, the satisfaction of the three tests outlined in Table 1 enable plans or projects to be adopted in spite of a likely effect on European Sites.

Section 3 of this report focuses on the identification of receptors and the extent that they are vulnerable to external impacts, while Section 5 assesses the likelihood of significant effects to those receptors arising from the source (the Joint Plan). In this way it will be possible to consider whether policies or sites in the Joint Plan have the potential to be sources of potential impacts and whether a pathway exists between these potential impacts and European sites.

3. European Sites Scoped into this Assessment and Considerations in Relation to Integrity

3.1 Area of Study

The Plan Area of the Joint Plan is shown in Figure 1 and covers the planning authority areas of North Yorkshire, the City of York and the North York Moors National Park.

Figure 1: Minerals and Waste Joint Plan Area

The European sites to be considered in this assessment, together with Ramsar Sites are shown in Figures 2, 3 and 4 below.

Because impacts from minerals and waste activity have the potential to occur beyond the Plan Area boundary, provided there is a pathway between the source of impacts and a European / Ramsar Site, a 15km buffer has been applied to the outer boundary of the Plan area and the European / Ramsar Sites within that buffer are also considered. However, it should be noted that for certain impacts, longer range pathways may exist. These will be investigated on a case by case basis.

3.2 European and Ramsar Sites

Figures 2 to 4 and Tables 3 to 5 List SACs, SPAs and Ramsar sites considered in this assessment.

3.3 Identifying the Conservation Objectives and Threats to the Integrity of European / Ramsar Sites

During the preparation of the Issues and Options Likely Significant Effects Report a list was compiled of the European / Ramsar sites contained within the area of study, alongside their qualifying features, conservation objectives and key threats to the integrity of these sites. This can be viewed at Appendix 1 of this report.

Using this information it is possible to begin to identify the sorts of impacts for which each individual site could be a potential receptor (see Section 2.3 for a description of the 'source – pathway- receptor approach used in this assessment).

4. Screening Assessment in Combination with other Plans and Projects

4.1 Potential Sources of Impacts from the Joint Plan

Tyldesley, 2009¹⁴ describes some of the ways in which impacts on European sites may arise at the strategic plan making stage, as summarised in Table 6 below.

Table 6¹⁵: Possible ways in which a Plan could result in significant impacts upon a European Site

Category of Impact that may Arise from a Strategic Change	How Such Impacts Might Occur
Types of change	A specific policy might be proposed in a plan that might have a significant effect on one or more European sites regardless of the size or location of that change.
Quantity of change	While policies might result in small changes with no real effect, in other cases a significant effect may occur as a result of the amount of change that is likely to occur. So a policy might generate a large amount of traffic on an existing road. While this might not have been a problem in the past, a step change in the level of traffic might result in greater noise or pollution affecting a neighbouring European Site.
Location of change	There may be a strategic need to focus development in a specific area. Where a plan contains policies or proposals that steer an amount or type of development that could be potentially damaging onto or adjacent to a European Site, a direct impact may occur. A plan may also indirectly affect a European Site, where it steers development towards an area that has connectivity to the site (e.g. hydrological connectivity) or where a plan may lead to the generation of other indirect effects (e.g. disturbance due to increased vehicle movements).
Blocking of other proposals or approaches	Future alternative approaches may be blocked by policies in a plan. For instance a non-damaging policy approach may no longer be an option if the plan commits an area to a specific approach that may in the longer term be damaging.
Justifying damaging development	Inclusion within a plan may give justification to interventions that would have otherwise been

Tyldesley, D. 2009. The Habitats Regulations Assessment of Local Development Documents Revised Draft Guidance for Natural England. Natural England, Sheffield.

¹⁵ Categories of impact and source material for the mechanisms by which effects may occur are adapted from text in Tyldesley, D (2009) The Habitats Regulations Assessment of Local Development Documents Revised Draft Guidance for Natural England. Natural England, Sheffield.

	considered on their merits alone. It is therefore important to ensure that only interventions that are consistent with the Habitats Regulations' requirements are included in the Joint Plan.
Combined / cumulative effects	While on their own the policies or proposals of a plan may not be likely to have significant effects, certain policies or proposals may work in combination with other plans and projects in such a way that a significant effect may occur.

4.2 In Combination Impacts: Consideration of other Plans and Projects that may Affect European / Ramsar sites in combination with the Joint Plan

The Habitats Directive requires that all significant effects of plans and projects, whether they are alone or in combination with other plans and projects, be assessed in view of European Sites' conservation objectives. This means that, even where an effect of the plan is deemed not to be significant on its own, it could be significant when added to the effects of one or more other plans and projects.

By the same token, it is important that in-combination assessment remains a manageable exercise. Therefore the focus of in combination assessment in this HRA will be on relevant plans that direct future growth or that seek to manage mineral resources and waste as these plans are considered to be the key sources of potential impacts. During the HRA assessment of individual sites or areas, consideration will be given to potential in combination effects with any specific relevant projects (e.g. major planning applications) where necessary.

All of the development plans in the Plan area and surrounding authorities have been reviewed to give a picture of anticipated levels of development during the timescale of the Joint Plan. Many of the plans that have been reviewed during in combination assessment have been subject to Habitats Regulations Assessments. These HRA documents can be useful in ascertaining the extent to which those plans are expected to impact on European sites.

Table 7 shows the plans that will be considered for in combination impact in this assessment.

Table 7: Plans considered 'in combination' where relevant

Name of Plan	Plan Type	Plan Status ¹⁶ (at October 2015)	Geographical Scope
Richmondshire Local Plan:	Land Use Plan	Core Strategy	Richmondshire

¹⁶ Note that plans which are under preparation may still give an indication of the direction of travel of that plan and the possibility of likely significant effects. Plans under preparation are also still likely to be supported by saved policies in earlier local plans. These saved policies will also be reviewed where relevant to the assessment of in combination effects.

5. Screening of Publication Plan Policies and Sites

5.1 Recording the Results of the Screening Assessment

Having established the European Sites of relevance to this assessment and the plans and projects that should be considered in combination with the Joint Plan, all draft policies are here screened in order to establish whether they are likely to have a potentially significant effect on a European Site.

Table 8 below shows the results of this screening exercise for the Joint Plan policies while Table 9 shows the results of the screening exercise for the Joint Plan sites.

Potential effects from all potential objectives and actions are categorised as follows, following Tyldesley, 2009:

-No negative effect: these are elements of the Plan that would have no negative effect on any European Site;

-No significant negative effect: these are elements of the Plan that could have an effect, but the likelihood is there would be no significant negative effect on a European Site either alone or in combination with other plans or projects. This category of effects includes trivial and '*de minimus*'¹⁷ impacts;

-Likely significant effect alone: these elements of the Plan will require full appropriate assessment unless the plan can be modified in a way that reduces the effect to no significant negative effect or no negative effect;

-Likely to have a significant effect in combination: as with the above category, elements of the strategy categorised in this way will be subject to appropriate assessment unless the combined effect can be reduced to no significant negative effect or no negative effect.

Uncertain: this is where it is not possible to make a judgement on the likelihood of significant effects occurring. These impacts will require further investigation via an appropriate assessment if they cannot be clarified.

¹⁷ Insignificant, negligible or of minor importance

Table 8: Screening of Joint Plan Policies

Note: All European sites within the Plan Area and a 15km buffer have been considered in this screening assessment. Further information regarding these European Sites, their features of interest and key threats to site integrity can be viewed in appendix 1

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
M01- Broad geographical approach to supply of aggregates.	This policy is not location specific so effects are uncertain as it depends upon where and how this policy is implemented. However, links to development management policies should minimise effects.	Potentially any European sites which are sensitive to aggregate extraction processes where a pathway exists between the site and aggregate extraction site.	<u>No significant negative effect.</u> Although the policy potentially allows extraction of aggregates from across the Plan Area, with the main focus being outside of designated landscapes, there are protections in the policy such as mitigation for environmental effects in AONBs. In addition, key links are made with the development management policies, including D01 to D10, which includes Policy D07 on biodiversity. This states "A very high level of protection will be afforded to sites designated at an international or national level, including SPAs, SACs, RAMSAR sites and SSSIs. Development which would have an unacceptable impact on these sites will not be permitted".	District Level/Unitary Authority Local Plans	<u>No significant negative effect</u> as this policy is unlikely to add to any existing or planned impacts as it links to policy D07.	
M02- Provision of sand and gravel	No possible pathway of impact as this policy relates to the calculation of provision of sand and gravel and no development would take place through the policy itself. Likely significant	None	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	impacts would therefore not occur as a result of this policy.					
M03- Overall distribution of sand and gravel provision	No possible pathway of impact as no development would take place through this policy itself. Development would take place through Policy M07 'Meeting Concreting Sand Requirements' and M08: 'Meeting Building Sand Requirements' which are both screened below. Likely significant impacts would therefore not occur as a result of this policy.	None	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	
M04- Landbanks for sand and gravel	No direct pathway of impact as no development would take place through this policy itself. Development would take place through Policy M07: 'Meeting Concreting Sand Requirements' and M08: 'Meeting Building Sand Requirements' which are both screened below. Likely significant impacts would therefore not occur as a result of this policy. Indirectly the policy may amplify any impacts (if there are any) as there will be pressure to maintain a landbank.	None	<u>No negative effect</u>	None	<u>No negative in combination effects. Although potentially this policy could amplify effects from M07 and M08, no significant effect is noted under those policies.</u>	
M05- Provision of crushed rock	No possible pathway of impact as this policy relates to the calculation of provision of crushed rock and no development would take place through the policy itself. Development would take place through Policy M09: 'Meeting Crushed Rock Requirements' which is screened below. Likely significant impacts would therefore not occur as a result of this policy. Indirectly the policy may amplify any impacts (if there are any) as there will be pressure to maintain a landbank.	None	<u>No negative effect</u>	None	<u>No negative in combination effects. Although potentially this policy could amplify effects from M09, no significant effect is noted under that policy.</u>	
M06- Landbanks for crushed rock	No possible pathway of impact as no development would take place through this policy itself. Development would take place through Policy M09: 'Meeting Crushed Rock Requirements' which is screened below. Likely significant impacts would therefore not	None	<u>No negative effect</u>	None	<u>No negative in combination effects. Although potentially this policy could amplify effects from M09, no significant effect is noted under</u>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	occur as a result of this policy. Indirectly the policy may amplify any impacts (if there are any) as there will be pressure to maintain a landbank.				that policy	
M07- Meeting concreting sand requirements	The main aspect of this policy is the allocation of sites. These have already been assessed in Table 9 (below). It was concluded that no likely significant effect would occur on Natura 2000 sites as a result of MJP21, MJP33, MJP17, MJP06, MJP07 and MJP14. The policy also refers to Areas of Search. Natura 2000 sites are excluded from Areas of Search and no significant effects on Natura 2000 sites were predicted during consideration of Areas of Search via the Sustainability Appraisal, so impacts are not expected	None	<u>No significant negative effect</u>	Harrogate District Core Strategy	<u>No significant negative in combination effects</u>	
M08- Meeting building sand requirements	The main aspect of this policy is the allocation of sites. These have already been assessed in table 9 and it was concluded that no likely significant effect would occur on Natura 2000 sites.	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
M09- Meeting crushed rock requirements	The main aspect of this policy is the allocation of preferred sites. These have already been assessed in table 9 and it was concluded that no likely significant effect would occur on Natura 2000 sites.	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
M10- Unallocated extensions to existing quarries	Any unallocated extensions would be required to be consistent with other development management policies in the plan including D07 Biodiversity and Geo-diversity which states that proposals will only be permitted where there will be no unacceptable impacts on biodiversity or geo-diversity including on statutory designated sites. Likely significant impacts would therefore not occur as a result of this policy.	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
M11- Supply of alternatives to land won primary aggregates	This policy refers to appropriately located sites but does not provide any specific guidance about where these	None	<u>No significant negative effect</u>	District Level/Unitary Authority Local Plans	<u>No significant negative in combination effects</u>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	may occur or what criteria would need to be met. However, the policy links to policy D07 Biodiversity and Geo-diversity which states that proposals will only be permitted where there will be no unacceptable impacts on biodiversity or geo-diversity including on statutory designated sites. Likely significant impacts would therefore not occur as a result of this policy.					
M12- Continuity of supply of silica sand	This policy states that extraction of Silica Sand at Blubberhouses Quarry would only be permitted subject to compliance with the Habitats Regulations. Extraction at both Blubberhouses and Burythorpe would also be required to be consistent with other development management policies in the plan including D07 Biodiversity and Geo-diversity which states that proposals will only be permitted where there will be no unacceptable impacts on biodiversity or geo-diversity including on statutory designated sites. Likely significant impacts would therefore not occur as a result of this policy.	North Pennine Moors SAC/SPA	<u>No significant negative effect</u>	North Yorkshire Local Transport Plan 4 includes reference to upgrading the A59 which runs close to the Blubberhouses Site.	<u>No significant negative in combination effects</u> As the policy does not generate likely significant effects on its own by definition the Plan cannot be said to generate cumulative effects. However, at a project level the potential for cumulative effects from the A59 should be considered for the Blubberhouses site. This issue could be referred to in the supporting text to the policy.	
M13- Continuity of supply of clay	The policy would be partly implemented through allocated sites including MJP45, MJP55 and MJP52. These have been screened in table 9. Proposals would be required to be consistent with other development management policies in the Plan including D07 Biodiversity and Geo-diversity which states that proposals will only be permitted where there will be no unacceptable impacts on biodiversity or geo-diversity including on statutory designated sites. Likely significant impacts would therefore not occur as a result of this policy.	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
M14- Incidental working of clay in association with other minerals	Incidental working of clay will only be	None	<u>No significant negative</u>	None	<u>No significant negative</u>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	allowed where it would not significantly increase environmental impacts associated with the primary working. In addition key links with development management policies are noted, including a link to policy DO7: Biodiversity and Geo-diversity. Likely significant impacts would therefore not occur as a result of this policy.		<u>effect</u>		<u>in combination effects</u>	
M15- Continuity of supply of building stone	Generally effects on biodiversity would likely be of low magnitude as the policy is largely focussed on time extensions, re-openings and other smaller scale purposes. However, proposals would be required to be consistent with other (development management) policies in the plan including the requirements for major development in National Parks and AONBs. Likely significant impacts would therefore not occur as a result of this policy. No effects are predicted from site MJP63.	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
M16- Key spatial principals for hydrocarbon development	Under this policy, surface proposals for exploration, appraisal and production of conventional hydrocarbons and unconventional hydrocarbons will only be permitted where they are outside of SPAs, SACs and Ramsar Sites, while coal mine methane production would be supported on industrial, employment and former coal mining sites. In addition, subsurface proposals, such as lateral drilling will only be permitted where significant harm to the designated asset would not occur. This in effect removes the pathways for significant effects on these receptors to take place.	None	<u>No negative effect</u>	None	<u>No significant negative in combination effects</u>	
M17- Other spatial and locational criteria applying to hydrocarbon development	This policy deals with issues such as transport associated with hydrocarbons development, as well as pipelines. Such features could, through effects such as disturbance and pollution deposition, in theory could	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects.</u> In addition, the policy includes specific protection from cumulative impacts	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	<p>impact on Natura 2000 sites if they took place in areas where a 'pathway' to a Natura 2000 site exists. However, the policy includes a strong protection from the impacts of transported gas, which should be via pipelines routed to have least practicable environmental impact, while hydraulic fracturing proposals should reduce the need for transport by also being located close to an adequate water supply.</p> <p>In addition to these protections, the policy includes links to other policies in the Plan (including D07: 'Biodiversity and Geo-diversity'). Likely significant impacts would therefore not occur as a result of this policy.</p>				with other existing, planned or unrestored hydrocarbons development.	
M18 - Other specific criteria applying to hydrocarbon development	<p>This policy relates to the management of waste at hydrocarbon sites as well as decommissioning and restoration.</p> <p>In relation to management of waste, the policy requires that a 'high standard of environmental protection can be demonstrated': such a 'high standard' would be inconsistent with significant effects on Natura 2000 sites.</p> <p>In terms of decommissioning and restoration, these requirements would generally help to reduce any potential effects on the environment (and therefore Natura 2000 sites) and may even ultimately provide additional supporting habitat. However, links to the policies also require that policy D07 'Biodiversity and Geo-diversity' is considered. Likely significant impacts would therefore not occur as a result of this policy.</p>	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
M19- Carbon and gas storage	Proposals for carbon capture and storage and the underground storage of gas would only be supported where	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	<p>there would not be unacceptable adverse impacts on the environment.</p> <p>However, links to other policies also require that policy D07 'Biodiversity and Geo-diversity' is considered. Likely significant impacts would therefore not occur as a result of this policy.</p>					
M20- Deep coal and disposal of colliery spoil	<p>This policy requires that the effects of subsidence on environmental designations are monitored and controlled to prevent unacceptable impacts. Proposals relating to the surface development would also need to be consistent with other development management policies in the plan. Links to other policies also require that policy D07 'Biodiversity and Geo-diversity' is considered. Likely significant impacts would therefore not occur as a result of this policy.</p>	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
M21- Shallow coal	<p>Proposals would need to be consistent with other policies in the plan including D07 'Biodiversity and Geo-diversity' and a high standard of protection would be provided to internationally and nationally important nature conservation designations. Likely significant impacts would therefore not occur as a result of this policy.</p>	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
M22- Potash and polyhalite supply	<p>Proposals would be required to either meet the criteria for major development or, for surface development and infrastructure, would be required not to have an unacceptable impact on the special qualities of the National Park (in which all of the North York Moors SAC / SPA are contained) and its environment.</p> <p>While the policy has a reasonable likelihood of coinciding with European sites, the link to the development management policies would trigger the requirement to not allow unacceptable</p>	North York Moors SAC / SPA	<u>No significant negative effect.</u>	None	<u>No significant negative in combination effects</u>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	<p>effects at European sites highlighted at policy D07.</p> <p>In addition, subsidence resulting from sub surface activity would be monitored and controlled.</p> <p>Likely significant impacts would therefore be unlikely to occur as a result of this policy.</p>					
M23- Supply of gypsum	Proposals would be required to be consistent with other development management policies in the plan. , including D07 'Biodiversity and Geo-diversity'. Likely significant impacts would therefore not occur as a result of this policy.	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
M24- Supply of vein minerals	Proposals would be required to be consistent with other development management policies in the plan including D07: 'Biodiversity and Geo-diversity' which states that proposals will only be permitted where there will be no unacceptable impacts on biodiversity or geo-diversity including on statutory designated sites. In addition, the policy requires particular regard for impacts on 'important habitats and species'. Likely significant impacts would therefore not occur as a result of this policy.	Given the location of the resource any impact would be on Natura 2000 sites in the North Pennines.	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
M25- Borrow Pits	Key links to other policies include D07: 'Biodiversity and Geo-diversity' which states that proposals will only be permitted where there will be no unacceptable impacts on biodiversity or geo-diversity including on statutory designated sites. Likely significant impacts would therefore not occur as a result of this policy.	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
W01- Moving waste up the waste hierarchy	No possible pathway of impact as no development would take place through this policy itself. Development would take place through other waste	None	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	policies, which are all screened below. Likely significant impacts would therefore not occur as a result of this policy.					
W02- Strategic role of the Plan area in the management of waste	No possible pathway of impact as no development would take place through this policy itself. Development would take place through other policies. Likely significant impacts would therefore not occur as a result of this policy.	None	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	
W03- Meeting waste management capacity requirements - Local Authority Collected Waste	No pathways or receptors for effects are predicted from the sites listed in the policy. Other sites are subject to development management policies which would offer protection to European Sites should an impact be possible. In addition, Policy W11 requires that 'in all cases sites will need to be suitable when considered in relation to...environmental...and any cumulative impact from previous waste disposal facilities, in line with national policy'. This would be an added layer of protection for Natural 2000 sites.	None	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	
W04- Meeting waste management capacity requirements – Commercial and Industrial Waste (including hazardous C&I waste)	<p>No pathways or receptors for effects are predicted from the sites for recycling, transfer and treatment of waste listed in the policy. Similarly, providing strategic scale capacity for recovery of energy at Allerton Waste Recovery Park, Southmoor Energy Centre and the former ARBRE Power Station is unlikely to result in significant effects as these sites are distant from Natura 2000 sites.</p> <p>Downwind from the ARBRE site lies Thorne and Hatfield Moors SPA/SAC as well as the Humber Estuary SAC (both sites have already exceeded critical loads for Nitrogen and acidity), though both of these receptors are more than 10km away and pollution impacts are far more likely to come</p>	Thorne and Hatfield Moor SAC/SPA; Humber Estuary SAC/SPA.	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	<p>from the nearby motorway network¹⁸. Southmoor is even more distant, while Allerton Park is around 9km (upwind) from Kirk Deighton SAC with no evident pathways between it and the site. It should also be noted that generating energy from waste would offset the need to acquire energy from power stations (two of which, Eggborough and Drax are closer to the Humber and Thorne / Hatfield Natura 2000 sites).</p> <p>The policy also refers to provision of capacity for management of C&I waste at sites WJP13, WJP18, WJP17, WJP08, WJP15, WJP16, WJP22, WJP19 and WJP11. None of these sites are predicted to have likely significant effects on Natura 2000 sites.</p>					
W05- Meeting waste management capacity requirements - Construction, Demolition and Excavation waste (including hazardous CD&E waste)	The policy seeks to achieve self-sufficiency in capacity for the management of CDE waste, however recycling CDE waste proposals and transfer station capacity must be consistent with policy W11 which requires that 'in all cases sites will need to be suitable when considered in relation to...environmental...and any cumulative impact from previous waste disposal facilities, in line with national policy'. Landfill capacity would need to be consistent with W01 parts 3 and 4 which limits opportunities for this kind of waste management for non-inert waste to where it is the only practicable option and insufficient capacity in the Plan area is not available. Policy WO1 links to policy	Any which are local to a future site.	<u>No significant negative effect.</u> An improbable risk is highlighted as a future CDE waste management site may create some local noise, dust or potentially changes to local hydrology. While in practice effects are unlikely (so this is not a 'likely significant effect') a precautionary measure could be added to remove any possible risk by ensuring that that this policy includes an explicit link	None	<u>No negative in combination effects</u>	

¹⁸ Pollution from energy from waste stacks drops significantly with distance (though dispersion is dependent on a range of factors such as topography, wind speed, stack height etc.) Essex County Council has cited Environment Agency Integrated Pollution Prevention and Control guidance in the Habitat Regulations Assessment of Essex Waste DPD. This states "The Environment Agency guidance on screening point-source pollution emitters (such as larger incinerators) for more detailed assessment lists the presence of a SSSI or Natura 2000 site within 10km as one of the indicators that detailed assessment (i.e. dispersion modelling) may be required. The implication of this is that the emissions of a point source can normally be considered inconsequential on sites located more than 10km distant" (URS Scott Wilson, 2011, Essex Waste Development Document: Preferred Approach – HRA Screening Report [URL: essex.gov.uk/Environment%20Planning/Planning/Minerals-Waste-Planning-Team/Planning-Policy/Documents/Habitat%20Regulations%20Assessment%20-%20Preferred%20Approaches%202011.pdf]

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	<p>D07 which gives protection to designated sites.</p> <p>While in principle this provides sufficient protection, the lack of a direct reference to policy D07 in the key links to other policies may add a small amount of doubt that the CDE waste has the potential to impact on Natura 2000 sites. Effects such as noise and dust pollution are the most likely impacts, though clearly such effects are quite local to any CDE sites, so impacts are in practice highly improbable. Similarly landfill might also lead to effects on the local hydrological regime (though in practice other regulatory controls (licensing) would avoid this risk).</p> <p>A number of allocations (WJP23, WJP08, MJP27, MJP26, WJP10, WJP05) are referred to for recycling of CDE waste, and WJP21, WJP05 and WJP06 are allocated for landfill. None of these allocations are predicted to have likely significant effects on Natura 2000 sites.</p>		to the development management policies for amenity, water and biodiversity (D02; D07 and D09) in the key links to other relevant policies section.			
W06- Managing agricultural waste	<p>Proposals would be required to be consistent with policy W11 which requires that 'in all cases sites will need to be suitable when considered in relation to...environmental...and any cumulative impact from previous waste disposal facilities, in line with national policy'. Likely significant impacts would therefore not occur as a result of this policy.</p> <p>A potential impact that may not be fully appreciated through the planning process is, however, the nutrient enriched run off that may occur from</p>	Humber Estuary Ramsar Site; Humber Estuary SAC; Humber Flats, Marshes and Coast SPA; Lower Derwent Valley SAC; Lower Derwent Valley SPA; Lower Derwent Valley Ramsar Site; Kirk Deighton SAC	<p><u>No significant negative effect.</u></p> <p>While a theoretical risk may exist from run off from storage on farm waste, the policy is already considered to be sufficiently protected through links to policy W11 and any risk would most likely, on its own, be negligible.</p>	Application of fertilizers generally within Nitrate Vulnerable Zones.	<p><u>Uncertain.</u></p> <p>A cumulative risk to water might be possible in Nitrate Vulnerable Zones which could affect Natura 2000 sites which are susceptible to nutrient enrichment of water bodies. The contribution of the policy is thought to be minimal, given the environmental permitting regime and</p>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	agricultural waste facilities where agricultural waste is stored, for instance for composting. Consistency with policy W11 should protect against this. But an additional protection could be added through links to the water environment development management policy (D09).				protections already within the policy. However, as an additional measure a link to policy D09 would help reduce impacts to non-significant levels.	
W07- Managing low level (non-nuclear) radioactive waste	Impacts from this are likely to be very small and below any significance threshold. In addition, Policy W11 and other relevant policies in the plan (including the linked biodiversity policy D07) are referenced in the policy.	Hydrologically linked or otherwise sensitive sites.	<u>No significant negative effect</u>	District Level/Unitary Authority Local Plans Waste Plans of surrounding / nearby authorities (where low level (non-nuclear) radioactive waste may be exported to)	<u>No significant negative in combination effects.</u> Earlier assessment considered that it was theoretically possible (though not very likely) that the insignificant effects of this policy could become significant if this policy made a larger site more viable in a location that could impact on a hydrological linked or otherwise sensitive Natura 2000 site (though it is likely that the permitting regime would address this). However the policy now includes links to policy D07, and other relevant policies report no significant effect (e.g. M18, W04) which reduces the possibility of significant in-combination impacts.	
W08- Managing waste water (sewage sludge)	This policy is not location specific (it is not clear where new infrastructure would be located). Effects such as accidental water pollution (e.g. during a flood event) could affect adjacent watercourses. However, proposals for	River Derwent SAC / Humber Estuary SAC/SPA	<u>No significant negative effects</u>	District Level/Unitary Authority Local Plans Waste Water Infrastructure Providers Asset Management Plans	<u>No significant negative in combination effects.</u>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	<p>new sites would be required to be consistent with policy W11 which requires that 'in all cases sites will need to be suitable when considered in relation to...environmental...and any cumulative impact from previous waste disposal facilities, in line with national policy'.</p> <p>In addition, co-location with anaerobic digestion facilities would need to be compliant with development management policies in the Plan.</p> <p>Likely significant impacts would therefore not occur as a result of this policy.</p>					
W09- Managing power station ash	<p>This policy encourages the use of power station ash as a secondary aggregate thereby reducing the demand for primary materials. Where power station ash cannot be used for beneficial purposes, it will be disposed of in line with current arrangements. Likely significant impacts would therefore not occur as a result of this policy. Neither Gale Common nor Barlow Common has any obvious pathways to Natura 2000 sites.</p>	None	<u>No likely significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
W10- Overall locational principles for provision of new waste capacity	<p>Proposals for development of capacity at new sites would be required to be in line with Policy W11 which states that sites would need to be suitable when considered in relation to environmental constraints. Development within the National Park and AONBs would only be allowed where it would not cause unacceptable harm to the designated area. The policy also maximises capacity at existing sites which should reduce the need for new sites (unless maximising capacity brings its own effects though this is thought unlikely as specific pathways have not been</p>	None	<u>No significant negative effect. Although significant impacts are considered unlikely the policy could be strengthened by the inclusion of links to the development management policy for biodiversity (DO7) in the 'key links to other policies'.</u>	None	<u>No significant negative in combination effects</u>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	identified). Likely significant impacts would therefore not be expected to occur as a result of this policy.					
W11- Waste site identification principles	This policy sets out a number of principles for the identification of new waste site capacity. The policy requires that all sites are suitable when considered in relation to environmental constraints and in line with national policy. Likely significant impacts would therefore not occur as a result of this policy.	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
I01- Minerals and Waste Transport infrastructure	Although not explicitly stated in the policy, proposals would be required to be consistent with other development management policies in the Plan which would minimise effects from this policy (which is, in any case, indirectly positive as it reduces traffic on roads). There are also links to development management policies such as D02 which would reduce a wide range of environmental effects (such as noise and dust) which would also reduce effects on Natura 2000 sites. In addition, the allocation at MJP09 is considered to have no likely significant effects. Likely significant impacts would therefore not be likely to occur as a result of this policy.	None	<u>No significant negative effect. Although likely significant impacts are considered to not occur the policy could be strengthened by the inclusion of links to the development management policy for biodiversity (D07) in the 'key links to other policies' section.</u>	None	<u>No significant negative in combination effects</u>	
I02- Locations for ancillary minerals infrastructure	The policy would only allow development of ancillary minerals infrastructure where it does not create significant additional adverse impact on the environment. Likely significant impacts on a Natura 2000 site would therefore not occur as a result of this policy.	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
S01- Safeguarding Mineral Resources	This policy relates to safeguarding minerals resources (ensuring that they are not sterilised for future use by conflicting developments) rather than promoting their extraction. The NPPF states that there is no presumption that resources defined in safeguarding	None	<u>No negative effect</u>	None	<u>No significant negative in combination effects</u>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	policies will be worked. Likely significant impacts on a Natura 2000 site would therefore not occur as a result of this policy.					
S02- Developments proposed within Minerals Safeguarding Areas	Although there is some overlap between Natura 2000 sites and Minerals Safeguarding Areas (MSA) this policy would only allow prior extraction of the mineral provided that there are no 'unacceptable adverse impacts on the environment'. This should prevent any significant effects on Natura 2000 sites.	Any sites coinciding with a MSA.	<u>No negative effect</u>	None	<u>No significant negative in combination effects</u>	
S03- Waste management facility safeguarding	<p>This policy relates to safeguarding waste management sites ensuring that they are not sterilised for future use by conflicting developments by use of a 250m buffer zone.</p> <p>This policy is likely to prevent incompatible development within 250m of a safeguarded waste site. No safeguarded waste management sites lie within 250m of a Natura 2000 site, and in any case this policy would lessen rather than increase development in that area. No likely significant effects are, therefore, observed.</p>	None	<u>No negative effect</u>	None	<u>No significant negative in combination effects</u>	
S04- Transport infrastructure safeguarding	<p>This policy relates to safeguarding transport infrastructure ensuring that it is not sterilised for future use by conflicting developments by use of a 100m buffer zone. The NPPF states that there is no presumption that resources/infrastructure defined in safeguarding policies will be developed.</p> <p>No safeguarded ancillary infrastructure sites lie within 100m of a Natura 2000 site, and in any case this policy would lessen rather than increase development in that area. Likely significant impacts on a Natura</p>	None	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	2000 site would therefore not occur as a result of this policy.					
S05- Minerals ancillary infrastructure safeguarding	<p>This policy relates to safeguarding minerals ancillary infrastructure ensuring that it is not sterilised for future use or replaced by conflicting developments. The NPPF states that there is no presumption that resources/infrastructure defined in safeguarding policies will be developed.</p> <p>No safeguarded ancillary infrastructure sites lie within 100m of a Natura 2000 site, and in any case this policy would lessen rather than increase development in that area. Likely significant impacts on a Natura 2000 site would therefore not occur as a result of this policy.</p>	None	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	
S06- Consideration of applications in Consultation Areas	No possible pathway of impact as no development would take place through this policy itself which requires consultation between the district councils and county council. Likely significant impacts on a Natura 2000 site would therefore not occur as a result of this policy.	None	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	
D01- Presumption in favour of sustainable minerals and waste development	This policy reflects the presumption in favour of sustainable development in the NPPF. The NPPF explicitly excludes development that would have an adverse impact on European sites from the presumption in favour of sustainable development. Likely significant impacts on a European Site would therefore not occur as a result of this policy.	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
D02- Local amenity and cumulative impacts	This is a development management policy. Development would not take place through the policy itself (rather through the relevant minerals, waste or infrastructure policy) and no pathway for likely significant effects on European Sites exists.	None	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
D03- Transport of minerals and waste and associated traffic impacts	This is a development management policy. Development would not take place through the policy itself (rather through the relevant minerals, waste or infrastructure policy) and no pathway for likely significant effects on European Sites exists.	None	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	
D04- North York Moors National Park and the AONBs	This policy states that major development within the National Park and AONBs will be refused except in exceptional circumstances. Consideration would be given to any detrimental effect on the environment in such exceptional circumstances. All other proposals in National Parks and AONBs would also be required to be consistent with other development management policies in the plan including D07: 'Biodiversity and Geo-diversity' which states that proposals will only be permitted where there will be no unacceptable impacts on biodiversity or geo-diversity including on statutory designated sites. Likely significant impacts would therefore not occur as a result of this policy.	Natura 2000 sites in National Parks	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
D05- Minerals and waste development in the Green Belt	This is a development management policy for Green Belt areas. Development would not take place through the policy itself (rather through the relevant minerals, waste or infrastructure policy) and no pathway for likely significant effects on European Sites exists.	Natura 2000 sites in the Green Belt.	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	
D06- Landscape	This is a development management policy. Development would not take place through the policy itself (rather through the relevant minerals, waste or infrastructure policy) and no pathway for likely significant effects on European Sites exists.	None	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	
D07- Biodiversity and geo-diversity	This is a positive development management policy which requires a very high level of protection to be afforded to designated sites and aims	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	to achieve net gains for biodiversity and geo-diversity.					
D08- Historic environment	This is a development management policy. Development would not take place through the policy itself (rather through the relevant minerals, waste or infrastructure policy) and no pathway for likely significant effects on European Sites exists.	None	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	
D09- Water environment	This is a development management policy. Development would not take place through the policy itself (rather through the relevant minerals, waste or infrastructure policy) and no pathway for likely significant effects on European Sites exists.	None	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	
D10- Reclamation and after use	This policy in effect requires that restoration and after use proposals should aim to maximise overall benefits and minimise overall adverse impacts. Proposals should also aim to deliver enhancements for biodiversity and improvements to habitat networks and connectivity. It is therefore considered to be a positive development management policy which provides no pathway for likely significant negative effects on European Sites.	None	<u>No significant negative effect</u>	None	<u>No significant negative in combination effects</u>	
D11- Sustainable design, construction and operation of development	This policy outlines design and other qualitative criteria for minerals and waste development and would not itself lead to development. Likely significant negative impacts would therefore not occur as a result of this policy. Indeed the policy is likely to lead to wider scale benefits such as a reduced contribution to climate change, which would have a beneficial effect.	None	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	
D12- Protection of agricultural land and soils	This is a development management policy. Development would not take	None	<u>No negative effect</u>	None	<u>No negative in</u>	

Plan Policy	Possible impact of Policy on European Site (sources / pathways)	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	place through the policy itself (rather through the relevant minerals, waste or infrastructure policy) and no pathway for likely significant effects on European Sites exists.				<u>combination effects</u>	
D13- Consideration of applications in Development High Risk Areas	This is a development management policy. Development would not take place through the policy itself (rather through the relevant minerals, waste or infrastructure policy) and no pathway for likely significant effects on European Sites exists.	None	<u>No negative effect</u>	None	<u>No negative in combination effects</u>	

Table 9: Screening of Joint Plan Sites

Site	Possible impact of Site on European Site (sources / pathways)	European Sites within 15km	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
MJP05 Lawrence House Farm (Jeffries) (DISCOUNTED SITE)	No pathways have been identified that are likely to give rise to significant effects.	14km W - North Pennine Moors SPA/SAC	None	As site MJP05 has been discounted from site allocations further appropriate assessment for the site is not necessary for the purposes of this Plan. Any planning application at this site would need to be consistent with Plan policies, which require a very high level of protection for SPAs, SACs and Ramsar Sites			
MJP06 Langwith Hall Farm (ALLOCATED SITE)	No pathways have been identified that are likely to give rise to significant effects.	10km W- North Pennine Moors SPA/SAC	None	No negative effect	None	No negative in combination effects

²¹ The Environment Agency Hydrological Impact Appraisal guidance includes a useful list of default areas for water feature surveys, which suggests that, as a starting point a survey area should be 2km in radius if the amount of water taken out of the aquifer is between 3,000 and 5,000 cubic metres per day, though local conditions should also be considered, particularly if 'sensitive abstractions or environmental features are located just beyond the specified radius; the aquifer is confined; or where there is a high degree of uncertainty about the aquifer characteristics'. In this making this assessment we have compared this site to 2 other sand and gravel sites, Newbold Quarry in Staffordshire where the intention is to extract 13.5 million tonnes of sand and gravel, and Swinderby Airfield quarry, where the intention is to extract 5.76 million tonnes. The former has a predicted extraction of water of 22,257 m³/day, though is clearly over 6 times bigger than this site. The latter, which is around twice as big, would extract 3,400 m³/day. This means that it is not usual for sand and gravel sites of this size to extract several thousand m³/day which could mean that impacts are possible up to 2km. As the Environment Agency guidance suggests extending search areas beyond 2 km for

Site	Possible impact of Site on European Site (sources / pathways)	European Sites within 15km	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	However, local conditions may vary, so considering the source-pathway-receptor approach the hydrological impact on this site should be investigated, or specific policy wording should be formulated to ensure an impact would not occur.						
MJP37 Moor Lane Farm (DISCOUNTED SITE)	No pathways have been identified that are likely to give rise to significant effects.	10km SW- Kirk Deighton SAC	None	As site MJP37 has been discounted from site allocations further appropriate assessment for the site is not necessary for the purposes of this Plan. Any planning application at this site would need to be consistent with Plan policies, which require a very high level of protection for SPAs, SACs and Ramsar Sites			
MJP38 Mill Cottages (DISCOUNTED SITE)	No pathways have been identified that are likely to give rise to significant effects.	9km W- North Pennine Moors SPA/SAC	None	As site MJP38 has been discounted from site allocations further appropriate assessment for the site is not necessary for the purposes of this Plan. Any planning application at this site would need to be consistent with Plan policies, which require a very high level of protection for SPAs, SACs and Ramsar Sites			
MJP39 Quarry House (DISCOUNTED SITE)	No pathways have been identified that are likely to give rise to significant effects.	8.5km W- North Pennine Moors SPA/SAC	None	As site MJP39 has been discounted from site allocations further appropriate assessment for the site is not necessary for the purposes of this Plan. Any planning application at this site would need to be consistent with Plan policies, which require a very high level of protection for SPAs, SACs and Ramsar Sites			
MJP41 Scalibar Farm (DISCOUNTED SITE)	No pathways have been identified that are likely to give rise to significant effects.	4.5km SE- Kirk Deighton SAC	None	As site MJP41 has been discounted from site allocations further appropriate assessment for the site is not necessary for the purposes of this Plan. Any planning application at this site would need to be consistent with Plan policies, which require a very high level of protection for SPAs, SACs and Ramsar Sites			
MJP43 Scruton (DISCOUNTED SITE)	No pathways have been identified that are likely to give rise to significant effects.	13.5KM NW- North Pennine Dales Meadows SAC, 13.5km SW- North Pennine Moors	None	As site MJP43 has been discounted from site allocations further appropriate assessment for the site is not necessary for the purposes of this Plan. Any planning application at this site would need to be consistent with Plan policies, which require a very high level of protection for SPAs, SACs and Ramsar Sites			
MJP44 Land between Great Heck and Pollington Airfield (ALLOCATED SITE)	No pathways have been identified that are likely to give rise to significant effects.	10km SE- Thorne Moor SAC/SPA, 10km NE - River Derwent SAC, 14km E- Humber Estuary	None	No negative effect	None	No negative in combination effects	

sensitive sites just beyond 2km this means that an impact cannot be ruled out until information about both the aquifer characteristics and the expected dewatering rate are clarified. However, it is likely that any impact could be moderated to an insignificant effect through mitigation. (Sources: Environment Agency, 2007. 		Ramsar/SAC/SPA					
MJP45 Hemingbrough (ALLOCATED SITE)	Although this site lies in relatively close proximity to the River Derwent SAC, no pathways have been identified between MJP45 and this European Site (particularly as clay is an aquitard so impacts from groundwater are considered to be insignificant). Significant impacts are therefore not anticipated.	2km E- River Derwent SAC, 4.8km N- Skipwith Common SAC, 7km SE- Humber Estuary SAC/SPA/Ramsar, 12.5km SE- Thorne Moor SAC/SPA	None	No negative effect	None	No negative in combination effects	
MJP46 Kiplin Plant (DISCOUNTED SITE)	No pathways have been identified that are likely to give rise to significant effects.	10KM NW - North Pennine Dales Meadows	None	As site MJP46 has been discounted from site allocations further appropriate assessment for the site is not necessary for the purposes of this Plan. Any planning application at this site would need to be consistent with Plan policies, which require a very high level of protection for SPAs, SACs and Ramsar Sites			
MJP49 Metes Lane (DISCOUNTED SITE)	No pathways have been identified that are likely to give rise to significant effects.	13km SE- Flamborough Head SAC	None	As site MJP49 has been discounted from site allocations further appropriate assessment for the site is not necessary for the purposes of this Plan. Any planning application at this site would need to be consistent with Plan policies, which require a very high level of protection for SPAs, SACs and Ramsar Sites			
MJP50 Sands Wood (DISCOUNTED SITE)	No pathways have been identified that are likely to give rise to significant effects.	4.3km W- River Derwent SAC, 10km N- Ellers Wood and Sand Dale SAC	None	As site MJP50 has been discounted from site allocations further appropriate assessment for the site is not necessary for the purposes of this Plan. Any planning application at this site would need to be consistent with Plan policies, which require a very high level of protection for SPAs, SACs and Ramsar Sites			
MJP51 Great Givendale (DISCOUNTED SITE)	No pathways have been identified that are likely to give rise to significant effects.	12km W- North Pennine Moors SPA/SAC	None	As site MJP51 has been discounted from site allocations further appropriate assessment for the site is not necessary for the purposes of this Plan. Any planning application at this site would need to be consistent with Plan policies, which require a very high level of protection for SPAs, SACs and Ramsar Sites			
MJP52 Duttons Farm (ALLOCATED SITE)	No pathways have been identified that are likely to give rise to significant effects.	10km NE- Strensall Common SAC, 14.8km SW- Kirk Deighton SAC	None	No negative effect	None	No negative in combination effects	
MJP53 Old London Road- White Quarry Farm (DISCOUNTED SITE)	No pathways have been identified that are likely to give rise to significant effects.	11.5km NW- Kirk Deighton SAC	None	As site MJP53 has been discounted from site allocations further appropriate assessment for the site is not necessary for the purposes of this Plan. Any planning application at this site would need to be consistent with Plan policies, which require a very high level of protection for SPAs, SACs and Ramsar Sites			
MJP54 Mill Balk (ALLOCATED SITE)	No pathways have been identified that are likely to give rise to significant effects.	12km SE- Thorne Moor SPA/SAC, 11.5km NE- River Derwent SAC	None	No negative effect	None	No negative in combination effects	

Site	Possible impact of Site on European Site (sources / pathways)	European Sites within 15km	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
MJP55 Escrick Brickworks (ALLOCATED SITE)	Skipwith Common SAC lies in relatively close proximity to the site and relies on the maintenance of water levels to maintain wet heath communities. Considering the source-pathway-receptor approach it is considered unlikely that there would be a significant impact on this site as the site lies beyond the search area for groundwater impacts associated with withdrawal of up to 5000 m ³ /day of water and at the outer edge of any search area for water abstractions above 5,000 m ³ /day ²² . Although any water withdrawal is as yet unknown this should be considered together with the fact that clay is an aquitard with low hydraulic conductivity, so impacts on the water table are likely to be limited. Water impacts are far more likely to be related to surface water and so are considered to be more local in nature.	3.25km SE (from main site) / 3 km from southern outlier site - Skipwith Common SAC, 7km E- Lower Derwent Valley SAC/SPA/Ramsar,	Skipwith Common SAC	No - Effects are seen as highly unlikely based on the information provided (though any planning application should seek to confirm this when hydrology is considered).	None	No negative in combination effects	
MJP58 Old London Road- recycling (DISCOUNTED SITE)	No pathways have been identified that are likely to give rise to significant effects.	12km NW- Kirk Deighton SAC	None	As site MJP58 has been discounted from site allocations further appropriate assessment for the site is not necessary for the purposes of this Plan. Any planning application at this site would need to be consistent with Plan policies, which require a very high level of protection for SPAs, SACs and Ramsar Sites			
MJP59 Spikers Quarry (DISCOUNTED SITE)	Although there is connectivity between MJP59 and the River Derwent (via a steep hill), the River Derwent does not become a European Site until in excess of 20km downstream. It is therefore	12km N - North York Moors SAC, 12km W - Eilers Wood and Sand Dale SAC, 12.5km NE- Beast Cliff-Whitby SAC	None	As site MJP59 has been discounted from site allocations further appropriate assessment for the site is not necessary for the purposes of this Plan. Any planning application at this site would need to be consistent with Plan policies, which require a very high level of protection for SPAs, SACs and Ramsar Sites			

²² Based on the Environment Agency Hydrological Impact Assessment Guidance referred to at footnote 20.

Site	Possible impact of Site on European Site (sources / pathways)	European Sites within 15km	Which European Sites could be affected (receptors)	Is the impact significant	Other plans and projects which might act in combination	Risk of a significant in combination effect	References/ notes
	considered that dilution effects along with a limited number of sources for pollution (assuming that the environmental permitting process operates effectively) means that likely significant impacts are not anticipated.						
MJP60 Land west of Kirkby Fleetham (DISCOUNTED SITE)	No pathways have been identified that are likely to give rise to significant effects.	11km NW- North Pennine Dales Meadows, 15km W- North Pennine Moors SPA/SAC	None	As site MJP60 has been discounted from site allocations further appropriate assessment for the site is not necessary for the purposes of this Plan. Any planning application at this site would need to be consistent with Plan policies, which require a very high level of protection for SPAs, SACs and Ramsar Sites			
MJP62 Toft Hill (DISCOUNTED SITE)	No pathways have been identified that are likely to give rise to significant effects.	8.9km NW- North Pennine Dales Meadows	None	As site MJP62 has been discounted from site allocations further appropriate assessment for the site is not necessary for the purposes of this Plan. Any planning application at this site would need to be consistent with Plan policies, which require a very high level of protection for SPAs, SACs and Ramsar Sites			
MJP63 Brows Quarry (ALLOCATED SITE)	Due to the limited size of the site and small scale of building stone extraction combined with limited pathways for pollutants (any minor risk from fuel spills could be easily mitigated by existing development management policies and would likely be low scale in any case) it is considered unlikely that there would be a significant impact on the River Derwent SAC. The adjacent site has been quarried previously without impact on the water table ²³ and it is thought highly unlikely there would be a hydrological impact on the conservation objectives of the SAC given the very small scale of this site when compared to the large catchment of the Derwent,	River Derwent SAC 260m SE	River Derwent SAC	No (though routine measures to mitigate for the risk of accidental fuel spills should be observed by the Plan).	None	No negative in combination effects

	communities. Considering the source-pathway-receptor approach it is considered unlikely that there would be a significant impact on this site as the site is a former clay site and clay is an aquitard with low hydraulic conductivity, so impacts on the water table are likely to be limited. In addition, the environmental permitting regime and the strict requirements for lining waste disposal sites and disposing of water means that groundwater impacts are unlikely, and more likely to be related to surface water and so are considered to be more local in nature (as there is no significant surface water connectivity between the site and Natura 2000 sites).			confirm this when hydrology is considered).

6. Results of the Screening Assessment

The HRA screening assessment presented in tables 8, 9 and 10 indicates that the large majority of policies, sites and areas of search presented in the Draft Publication Plan document can be progressed in line with the requirements of the Habitats Regulations. At this stage, the large majority of policies and sites and all of the areas of search are considered likely to have no negative effect or no significant negative effect on a European Site.

Of course that does not mean that all planning applications that come forward will in all cases have no effect on the Natura 2000 network. It does, however mean that there is a suitable suite of policies and site allocations to ensure that any planning application would be judged on the likelihood of significant effects occurring, and would be capable of being amended to be consistent with the Habitats Regulations.

One policy, W06 'Managing Agricultural Waste', was highlighted as having an uncertain 'in combination effect' on water bodies, which could include Natura 2000 sites. Section 7 below looks at removing this uncertainty. In addition 4 policies noted that significant effects were unlikely (so likely significant effects were not noted) but the assessment advised some precautionary mitigation to avoid any theoretical effect. These are also explored further in section 7.

Readers will note that several sites considered at preferred options as having uncertain effects now no longer show such effects. This is because they have been discounted from Plan allocations (for a range of reasons other than possible impacts on Natura 2000 sites). Although these site may or may not eventually be the subject of planning applications, the Plan cannot reasonably assess such proposals, and therefore makes no conclusions about their compatibility with the Habitats Regulations. All that can be said is that any proposal that comes forward outside of the allocations process will be subject to the policies in the Joint Plan, which have been tested for consistency with the Habitats Regulation.

7. Further Assessment to Remove Uncertainty or Apply Precautionary Mitigation

As noted in the results section above, one policy, W06 'Managing Agricultural Waste', was highlighted as having an uncertain 'in combination effect' on water bodies, which could include Natura 2000 sites, such as the River Derwent.

In addition 4 policies noted that significant effects were unlikely (so likely significant effects were not noted) but the assessment advised some precautionary mitigation to avoid any theoretical effect.

In terms of W06 a cumulative risk to water might be possible in Nitrate Vulnerable Zones which could affect Natura 2000 sites which are susceptible to nutrient enrichment of water bodies. This is because managing farm waste can, if not properly managed, result in

leachate running off from storage sites and ultimately entering either groundwater or surface water bodies together with nitrates from nearby farms. While the policy itself presents a minimal risk, the policy is already considered to be sufficiently protected through links to policy W11, and thus any risk would most likely, on its own, be negligible as W11 states *“In all cases sites will need to be suitable when considered in relation to physical, environmental, amenity and infrastructure constraints...”*. The risk of pollution to a water body would be considered an environmental constraint.

Pathways for impacts may, however, occur where several on-farm waste sites lie close together, and either poor management or a flood event washes nutrient enriched water from sites and into water bodies connected to a Natura 2000 site.

A review of Defra’s Magic web map shows that several SACs, SPAs and Ramsar sites lie within Nitrate Vulnerable Zones, though the key sensitivities highlighted at appendix 1 (derived from review of site information including conservation objectives) show that the following sites are sensitive to changes in water quality and lie in, or have possible connectivity to, Nitrate Vulnerable Zones:

- Humber Estuary Ramsar Site
- Humber Estuary SAC
- Humber Flats, Marshes and Coast SPA
- Lower Derwent Valley SAC
- Lower Derwent Valley SPA
- Lower Derwent Valley Ramsar Site
- Kirk Deighton SAC

While the contribution of policy W06 to this possible cumulative effect is minimal It is considered that the risk could only realistically be mitigated through consideration of proposals on a site by site basis; in particular whether storage of waste is likely to be above the maximum flood level and whether on site controls are sufficient to control run off. While to some extent this is likely to be controlled by the environmental permitting regime, a policy regime that reduces the likelihood that any impact could occur from locational factors would be helpful in reducing any residual risk.

To this end it **is proposed that, in the ‘key links to other relevant policies and objectives’ the policy refers to policies D07 (‘Biodiversity and Geodiversity’, which affords a very high level of protection to Natura 2000 sites and permits development where there will be no unacceptable impacts on biodiversity) and D09 (‘Water Environment’, which requires that proposals for minerals and waste development should not have unacceptable impacts on surface or groundwater quality, and requires for development that is not allocated, an unacceptable risk of flooding will not be permitted).**

In terms of the further precautionary mitigation that could deal with any hypothetical, but not likely, risk from policies, table 10 sets out which policies could benefit from precautionary mitigation and how this should be applied.

Table 11: Precautionary Mitigation Proposed for Policies

Policy Number / Title	Issue	Proposed Precautionary Mitigation
M12 Continuity of Supply of Silica Sand	<p>This policy states that extraction of Silica Sand at Blubberhouses Quarry would only be permitted subject to compliance with the Habitats Regulations. Extraction at both Blubberhouses and Burythorpe would also be required to be consistent with other development management policies in the plan including D07 Biodiversity and Geo-diversity which states that proposals will only be permitted where there will be no unacceptable impacts on biodiversity or geo-diversity including on statutory designated sites. Likely significant impacts would therefore not occur as a result of this policy.</p>	<p>As the policy does not generate likely significant effects on its own, by definition the Plan cannot be said to generate cumulative effects. However the assessment notes that, <u>at a project level the potential for cumulative effects from the possible future A59 road improvements should be considered for the Blubberhouses site. This issue could be referred to in the supporting text to the policy.</u></p>
W05 Meeting Waste Management Capacity Requirements – Construction, Demolition and Excavation Waste (including hazardous CD&E waste)	<p>The policy seeks to achieve self-sufficiency in capacity for the management of CDE waste, however recycling CDE waste proposals and transfer station capacity must be consistent with policy W11 which requires that ‘in all cases sites will need to be suitable when considered in relation to...environmental...and any cumulative impact from previous waste disposal facilities, in line with national policy’. Landfill capacity would need to be consistent with W01 parts 3 and 4 which limits opportunities for this kind of waste management for non-inert waste to where it is the only practicable option and insufficient capacity in the Plan area is not available. Policy WO1 links to policy D07 which gives protection to designated sites.</p> <p>While in principle this provides sufficient protection, the lack of a direct reference to policy D07 in the key links to other</p>	<p>An improbable risk is highlighted as a future CDE waste management site may create some local noise, dust or potentially changes to local hydrology. While in practice effects are unlikely (so this is not a ‘likely significant effect’) a precautionary measure could be added to remove any possible risk by <u>ensuring that that this policy includes an explicit link to the development management policies for amenity, water and biodiversity (D02; D07 and D09) in the key links to other relevant policies section.</u></p>

	<p>policies may add a small amount of doubt that the CDE waste has the potential to impact on Natura 2000 sites. Effects such as noise and dust pollution are the most likely impacts, though clearly such effects are quite local to any CDE sites, so impacts are in practice highly improbable. Similarly landfill might also lead to effects on the local hydrological regime (though in practice other regulatory controls (licensing) would avoid this risk).</p> <p>A number of allocations (WJP23, WJP08, MJP27, MJP26, WJP10, WJP05) are referred to for recycling of CDE waste, and WJP21, WJP05 and WJP06 are allocated for landfill. None of these allocations are predicted to have likely significant effects on Natura 2000 sites.</p>	
<p>W10 Overall Locational Principles for Provision of Waste Capacity</p>	<p>Proposals for development of capacity at new sites would be required to be in line with Policy W11 which states that sites would need to be suitable when considered in relation to environmental constraints. Development within the National Park and AONBs would only be allowed where it would not cause unacceptable harm to the designated area. The policy also maximises capacity at existing sites which should reduce the need for new sites (unless maximising capacity brings its own effects though this is thought unlikely as specific pathways have not been identified). Likely significant impacts would therefore not be expected to occur as a result of this policy.</p>	<p>Although likely significant impacts are considered unlikely <u>the policy could be strengthened by the inclusion of links to the development management policy for biodiversity (DO7) in the ‘key links to other policies’.</u></p>
<p>I01 Minerals and Waste Transport Infrastructure</p>	<p>Although not explicitly stated in the policy, proposals would be required to be consistent with other development management policies in the Plan which would minimise effects from this policy</p>	<p>Although likely significant impacts are considered to not occur, <u>the policy could be strengthened by the inclusion of links to the</u></p>

	<p>(which is, in any case, indirectly positive as it reduces traffic on roads). There are also links to development management policies such as D02 which would reduce a wide range of environmental effects (such as noise and dust) which would also reduce effects on Natura 2000 sites. In addition, the allocation at MJP09 is considered to have no likely significant effects. Likely significant impacts would therefore not be likely to occur as a result of this policy.</p>	<p><u>development management policy for biodiversity (D07) in the ‘key links to other policies’ section.</u></p>
--	---	---

8. Conclusion

Broadly this Habitats Regulations Assessment has found that the Joint Plan is consistent with the Habitats Regulations. However, a small amount of cumulative uncertainty was reported in relation to one policy, while 4 other policies were identified as having the potential for further enhancement through precautionary mitigation.

To address these issues recommendations were set out in section 7. Incorporating this mitigation into the Joint Plan would ensure that it is consistent with the Habitats Regulations.

Appendix 1: Natura 2000 Sites and their Qualifying Features, Conservation Objectives and Key Threats to Site Integrity

Table A1 Special Areas of Conservation

Name of Site	Qualifying features <i>(features in bold denote priority natural habitats or species subject to special provisions in the Habitats Directive)²⁵</i>	Conservation Objectives <i>(Avoid the deterioration of the qualifying natural habitats and the habitats of qualifying species, and the significant disturbance of those qualifying species, ensuring the integrity of the site is maintained and makes a full contribution to achieving Favourable Conservation Status of each of the qualifying features).</i>	Key Threats to Site Integrity
Arnecliff and Park Hole Woods SAC	<p>Annex II species that are a primary reason for selection: Killarney fern <i>Trichomanes speciosum</i></p> <p>Annex I habitats present as a qualifying feature, but not a primary reason for selection: Old sessile oak woods with <i>Ilex</i> and <i>Blechnum</i> in the British Isles; Western acidic oak woodland</p>	<p>With regard to the natural habitats and / or species for which the site has been designated (see Qualifying features); subject to natural change, to maintain or restore:</p> <ul style="list-style-type: none"> -The extent and distribution of qualifying natural habitats and habitats of qualifying species;; -The structure and function (including typical species) of qualifying natural habitats and habits of qualifying species; -The supporting processes on which qualifying 	<ul style="list-style-type: none"> - Specimen collecting; - Physical loss of habitat from woodland under and over management (e.g. removal and smothering, fragmentation of habitat); - Pollution (e.g. from iron workings); - Changes in thermal regime; - Physical damage to habitat; - Increase in pH of underlying soils

²⁵ Of particular note, is Article 6(4) of the Directive, which states *‘If in spite of a negative assessment of the implications for the site and in the absence of alternative solutions, a plan or project must nevertheless be carried out for imperative reasons of overriding public interest, including those of a social or economic nature, the Member State shall take all compensatory measures necessary to ensure that the overall coherence of Natura 2000 is protected. It shall inform the Commission of the compensatory measures adopted. Where the site concerned hosts a priority natural habitat type and / or priority species, the only considerations which may be raised are those relating to human health or public safety, to beneficial consequences of primary importance for the environment or, further to an opinion from the commission, to other imperative reasons of overriding public interest’*. The Article is transposed via 62 (2) of the 2010 Regulations.

³⁰ JNCC Report No. 426 provides a good overview of the sensitivity of lowland heathland communities to air pollution: “*Heathland communities are very sensitive to acid deposition. The organo-mineral soils and stress tolerant vegetation mean they are sensitive to both acidification and eutrophication.....in the UK experimental N additions at a level just above the critical load for N have shown changes in productivity, litter production, N cycling and Lichens in lowland heath... but little evidence of grass invasion was seen unless disturbance accompanied N treatment*” Stevens, C.J. et al, 2009. JNCC Report No. 426: Detecting and attributing air pollution impacts during SSSI condition assessment. JNCC, Peterborough [URL: jncc.defra.gov.uk/pdf/JNCC426web.pdf]

Table A 1.3 Ramsar Sites

Name of Site	Qualifying features	Conservation Objectives	Key Threats to Site Integrity
Humber Estuary Ramsar	<p>The site qualifies under:</p> <p>Ramsar criterion 1: The site is a representative example of a near-natural estuary with the following component habitats: dune systems and humid dune slacks, estuarine waters, intertidal mud and sand flats, saltmarshes, and coastal brackish/saline lagoons.</p> <p>Ramsar criterion 3: The Humber Estuary Ramsar site supports a breeding colony of grey seals <i>Halichoerus grypus</i> at Donna Nook. It is the second largest grey seal colony in England and the furthest south regular breeding site on the east coast. The dune slacks at Saltfleetby-Theddlethorpe on the southern extremity of the Ramsar site are</p>	<p>For most Ramsar sites interest features are covered by the conservation objectives for the SAC, Special Protection Area or Site of Special Scientific Interest as appropriate. However, in 2003 English Nature published specific advice³³ on conservation objectives for Ramsar criteria³⁴ at the site. These are:</p> <p><u>Criteria 3:</u> Subject to natural change, maintain the wetland hosting a breeding colony of grey seals in favourable condition, in particular:</p> <p>-Intertidal mudflats and sandflats</p> <p><u>Criteria 5:</u> Subject to natural change, maintain the wetland regularly supporting 20,000 or more waterfowl in favourable condition, in particular:</p> <p>-Intertidal mudflats and sandflats;</p>	<p>-Coastal development (housing, commercial, industry) leading to loss and degradation of habitat, (toxic and non-toxic contamination, erosion, fragmentation, sedimentation, etc.) impacts on integrity of breeding and wintering population via disturbance (noise, trampling, presence);</p> <p>-Flood defence leading to loss and degradation of habitat, fragmentation, barrier effects and coastal squeeze, changes in hydrology (flow rate and water level);</p> <p>-Sewage discharge (domestic and industrial) and pollution from fertiliser ingress resulting in eutrophication, sedimentation changes in turbidity and pH, salinity, indirect effects of reduced water quality on food resources.</p>

³³ English Nature, 2003. The Humber Estuary European Marine Site: English Nature's advice given under Regulation 33 (2) of the Conservation (Natural Habitats &c.) Regulations 1994: Interim Advice, April 2003 [URL: humberems.co.uk/downloads/English%20Natures%20Reg%2033%20Advice.pdf]

³⁴ At the time of publication the Humber Estuary qualified under criteria 2, 3, 5 and 6.

Name of Site	Qualifying features	Conservation Objectives	Key Threats to Site Integrity
	<p>the most north-easterly breeding site in Great Britain of the natterjack toad <i>Bufo calamita</i>.</p> <p>Ramsar criterion 5: Assemblages of international importance – 153,934 waterfowl, non breeding season.</p> <p>Ramsar criterion 6: species / populations at levels of international importance:</p> <ul style="list-style-type: none"> - <i>Pluvialis apricaria altifrons</i> (on passage: 2.2% of population) - <i>Calidris canutus islandica</i> (on passage: 4.1 %); - <i>Calidris alpine alpine</i> (on passage: 1.5 %); - <i>Limosa limosa islandica</i> (on passage: 2.6%); - <i>Tringa totanus brittanica</i> (on passage: 5.7%) - <i>Tadorna tadorna</i> (wintering: 1.5%) - <i>Pluvialis apricaria altifrons</i> (wintering: 3.8% of population) - <i>Calidris canutus islandica</i> (wintering: 6.3%); - <i>Calidris alpine alpina</i> (wintering: 1.7%); - <i>Limosa limosa islandica</i> (wintering: 3.2%); - <i>Limosa lapponica lapponica</i> (wintering: 2.3%); - <i>Tringa totanus brittanica</i> (wintering: 3.6%). <p>Ramsar criterion 8: The Humber Estuary acts as an important migration route for both river lamprey <i>Lampetra fluviatilis</i> and sea lamprey <i>Petromyzon marinus</i> between coastal waters and their spawning areas.</p>	<ul style="list-style-type: none"> -Saltmarsh communities; -Tidal reedbeds -Coastal lagoons <p><u>Criteria 6:</u> Subject to natural change, maintain the wetland regularly supporting 1 percent or more of the individuals in a population of one species or sub-species of waterfowl in favourable condition, in particular:</p> <ul style="list-style-type: none"> -Intertidal mudflats and sandflats; -Saltmarsh communities; -Tidal reedbeds -Coastal lagoons 	<p>Upstream pollution may cause a barrier to fish migration;</p> <p>-Recreation pressure causing impacts on integrity of breeding and wintering population via disturbance (noise, trampling, presence);</p> <p>Hydrological changes (such as increased abstraction causing reduced freshwater input);</p> <p>Lack of reedbed management causing scrub encroachment.</p>

Name of Site	Qualifying features	Conservation Objectives	Key Threats to Site Integrity
Leighton Moss Ramsar	<p>The site qualifies under:</p> <p>Ramsar criterion 1: the site is an example of a large reedbed habitat characteristic of the biogeographical region. The site is particularly important for breeding populations of great bittern <i>Botaurus stellaris</i>, Eurasian marsh harrier <i>Circus aeruginosus</i> and bearded tit <i>Panurus biarmicus</i>.</p> <p>Ramsar criterion 3: The site supports a range of breeding birds (great bittern <i>Botaurus stellaris</i>, Eurasian marsh harrier <i>Circus aeruginosus</i> and bearded tit <i>Panurus biarmicus</i>) and also nationally important numbers of northern shoveler <i>Anas clypeata</i> and water rail <i>Rallus aquaticus</i>.</p>	<p>No specific Ramsar conservation objectives have been published for this site. This Ramsar site's interest features are covered by the conservation objectives for the Sites of Special Scientific Interest as appropriate.</p>	<ul style="list-style-type: none"> - Sedimentation/siltation resulting in increased turbidity and loss of aquatic flora and subsequently decreased quality of bittern habitat. - Pollution (pesticides/agricultural runoff) - slurry from adjacent dairy farm and inorganic compounds from other agricultural sources. - Contamination may occur due to eutrophication by agrochemicals or through saline incursion -Changes in water levels (including through groundwater extraction) may cause changes in hydrology (flow rate and water levels). Stability during breeding season is particularly important; -Lack of scrub control may lead to physical loss (smothering) of habitat and changes in hydrology -Dead leaf litter accumulation may cause habitat loss due to drying out of reed beds -Recreational disturbance leading to noise, trampling and disturbance.
Lower Derwent Valley Ramsar	<p>The site qualifies under:</p> <p>Ramsar criterion 1: The site represents one of the most important examples of traditionally managed species-rich alluvial flood meadow habitat remaining in the UK. The river and flood meadows play a substantial role in the hydrological and ecological functioning of the Humber Basin.</p>	<p>No specific Ramsar conservation objectives have been published for this site. This Ramsar site's interest features are covered by the conservation objectives for the SAC, Special Protection Area or Sites of Special Scientific Interest as appropriate.</p>	<ul style="list-style-type: none"> -Coal or other mineral extraction causing physical loss (removal and smothering), hydrological change (water level and flow rate); -Flood management and tidal barrage leading to hydrological change (water level and flow rate), physical damage (barrier effects and habitat fragmentation); - Domestic and industrial sewage

Name of Site	Qualifying features	Conservation Objectives	Key Threats to Site Integrity
	<p>Ramsar criterion 2: The site has a rich assemblage of wetland invertebrates including 16 species of dragonfly and damselfly, 15 British Red Data Book wetland invertebrates as well as a leafhopper, <i>Cicadula ornate</i> for which Lower Derwent Valley is the only known site in Great Britain</p> <p>Ramsar criterion 4: The site qualifies as a staging post for passage birds in spring. Of particular note are the nationally important numbers of Ruff, <i>Philomachus pugnax</i> and Whimbrel, <i>Numenius phaeopus</i>.</p> <p>Ramsar criterion 5: Assemblages of international importance – 31942 waterfowl – species with peak counts in winter.</p> <p>Ramsar criterion 6: species / populations at levels of international importance: -<i>Anas Penelope</i> (2% of GB population); -<i>Anas crecca</i> (1% of the population);</p>		<p>outflow causing nutrient / phosphorous enrichment;</p> <ul style="list-style-type: none"> - Intensive agriculture leading to physical loss of habitat (removal), physical damage (erosion, habitat fragmentation, siltation from agricultural runoff), toxic contamination of groundwater (sheep dipping), and non-toxic contamination (nutrient enrichment); - Process industry causing non-toxic contamination (acidification from sulphur deposition); - Alteration of channel structure (canalisation, artificial barriers, etc.) leading to physical loss and damage (removal of and damage to riverside woodlands, barrier effects and habitat fragmentation), hydrological change (water level and flow rate); -Water abstraction resulting in hydrological change (water level and flow rate), physical damage (drying and habitat fragmentation); - Waste management (including landfill) causing physical loss of habitat (removal and smothering), nutrient deposition and acidification and hydrological change (water level and flow rate); - Housing, inappropriate access and other development leading to recreational pressure may lead to physical damage (erosion and fragmentation, accidental fires); disturbance of nesting and/or over-wintering birds.
Malham Tarn Ramsar	<p>The site qualifies under:</p> <p>Ramsar criterion 1: Contains the highest</p>	<p>No specific Ramsar conservation objectives have been published for this site. This Ramsar site's interest features are covered by the conservation</p>	<ul style="list-style-type: none"> - Process industry leading to acidification of habitat from sulphur deposition;

Name of Site	Qualifying features	Conservation Objectives	Key Threats to Site Integrity
	<p>marl lake in Britain, along with acidophilous bog, calcareous fen and soligenous mire.</p> <p>Ramsar criterion 2: Supports the nationally rare alpine bartisia <i>Bartsia alpina</i> and narrow small reed <i>Calamagrostis stricta</i> and seven nationally scarce species. Supports five listed British Red Data Book invertebrates including the caddis fly <i>Agrypnia crassicornis</i></p>	<p>objectives for the Sites of Special Scientific Interest as appropriate.</p>	<ul style="list-style-type: none"> - Agricultural drainage causing hydrological change (water level and flow rate); - Recreational pressure may cause physical damage (erosion and fragmentation); - Quarrying could cause physical loss of habitat (removal), physical damage (sedimentation, erosion, fragmentation, barrier effects), hydrological change (water level), and changes in thermal regime and turbidity; - Agricultural and industrial runoff in catchment could lead to non-toxic contamination (nutrient enrichment).
Morecambe Bay Ramsar	<p>The site qualifies under:</p> <p>Ramsar criteria 4: The site is a staging area for migratory waterfowl including internationally important numbers of passage ringed plover <i>Charadrius hiaticula</i>.</p> <p>Ramsar criterion 5: Assemblages of international importance – 223709 waterfowl – species with peak counts in winter.</p> <p>Ramsar criterion 6: species / populations at levels of international importance:</p> <p>Regularly supported during breeding season:</p> <ul style="list-style-type: none"> -<i>Larus fuscus graellsii</i> (13.3% of the breeding population) -<i>Larus argentatus argentatus</i> (2.8% of the breeding population) -<i>Sterna sandvicensis sandvicensis</i> (2.8% of GB population) 	<p>No specific Ramsar conservation objectives have been published for this site. This Ramsar site's interest features are covered by the conservation objectives for the SAC, Special Protection Area or Sites of Special Scientific Interest as appropriate.</p>	<ul style="list-style-type: none"> -Land claim for agriculture may lead to physical loss (removal) of habitat; -Intensive agriculture could cause physical loss of habitat (removal), physical damage (erosion, habitat fragmentation, siltation from agricultural runoff), toxic contamination of groundwater (sheep dipping), and nutrient enrichment of habitats; -Intensive grazing leading to physical loss of habitat and physical damage (trampling); - Coastal protection and flood defence may have the effect of preventing natural erosion, and / or causing loss and degradation of habitat, fragmentation, barrier effects and changes in hydrology (flow rate and water level); -Fishing may lead to physical damage to habitat (erosion, fragmentation); -Quarrying may cause physical loss of habitat, physical damage (sedimentation, erosion, fragmentation, barrier effects), hydrological change

Name of Site	Qualifying features	Conservation Objectives	Key Threats to Site Integrity
	<p>Species with peak counts in spring / autumn:</p> <ul style="list-style-type: none"> -<i>Phalacrocorax carbo carbo</i> (4.2 % of the GB population); -<i>Tadorna tadorna</i> (2.3% of the population) -<i>Anas acuta</i> (6.2 % of the population) -<i>Somateria mollissima mollissima</i> (7.7 % of the GB population) -<i>Haematopus ostralegus ostralegus</i> (6.5% of the GB population) -<i>Charadrius hiaticula</i> (1.4% of the population) -<i>Pluvialis squatarola</i> (3.1% of GB population) -<i>Calidris alba</i> (3.4%of the GB population) -<i>Numenius arquata arquata</i> (4.7% of the population) -<i>Tringa totanus totanus</i> (3.5% of the population) -<i>Arenaria interpres interpres</i> (1.4% of the population) -<i>Larus fuscus graellsii</i> (7.6% of the population) <p>Species with peak counts in winter:</p> <ul style="list-style-type: none"> -<i>Podiceps cristatus cristatus</i> (1.3% of the population) -<i>Anser brachyrhynchus</i> (1.5% of the population) -<i>Anas Penelope</i> (1.5% of the GB population) -<i>Bucephala clangula clangula</i> (1.1% of the GB population) -<i>Mergus serrator</i> (3.3% of the GB population) -<i>Pluvialis apricaria apricaria</i> (1.6% of the GB population) -<i>Vanellus vanellus</i> (1% of the GB population) 		<p>(water level), or changes in thermal regime and turbidity;</p> <ul style="list-style-type: none"> -Gas exploration may result in physical damage to habitat; -Recreational disturbance may lead to physical damage (erosion and fragmentation)
