

Street Lighting

Not always something we notice, but lighting creates a character in the street as much as it does in our homes. There are elements of historic styles in Selby, sometimes attached to properties as well as free standing. Colour of the light and colour of the structure are all significant, and those that are damaged and broken can have a negative impact on the significant views and appearance of the area.

This may be something we need to consider outside the hours of the audit...and give some feedback later on.

Considering the needs for security, access, safety, and the area's character, is it:

	Too bright	
	Too dark	
	Just right	
	N/A (done in daytime)	
	Yes	No
Are they in good repair?		

What can you see?

*Are there any that look like they might be historical or any that are architectural interesting?
Record their location.*
