Notes:

1.1m min height. Height will vary according to local precedent from 1.4 to 1.7m tall, without without stockproof fence depending on landowner requirement.

- All 1:3 embankments and cuttings will be hydroseeded in August/September.

- Bridgeway to have wildflower grass mix on each verge and central reservation.

- Reinstated A5, Verges to be seeded with 20% wildflower and 80% grass seed mix.

- All existing trees and woodland edges are plotted from site results using a handheld GPS with a 5m tolerance. At detailed design stage, a topographic survey will confirm exact location of vegetation and the design amended accordingly, to mitigate potential tree loss.

- Tree positions to be agreed on site with the Project Manager to avoid conflicts with the Load Transfer Platform which forms part of the structure of the piled embankment.

- For details of proposed boundary treatments, please refer to NYKGDD-WSP-HFE-ZZ-DR-CH-03001 to 03006.
