Enviros technical endorsement of the 'Preferred Bidder' proposal for residual waste treatment for NYCC and CYC

As promised, please find below Enviros' technical endorsement of the Preferred Bidder's proposal for residual waste treatment for North Yorkshire and City of York.

The Preferred Bidder's proposed technical solution is appropriate, the overall configuration of facility is logical, and there are no significant concerns which would adversely affect project delivery. The solution has been designed using prudent assumptions backed up with process guarantees from relevant technology providers who have a good track record in delivering reliable and robust solutions. The solution is capable of delivering the Contract Targets proposed by the Preferred Bidder - specifically the BMW Diversion, Landfill Diversion and Recycling Targets - whilst enhancing the sustainability of North Yorkshire and City of York's waste management services.

Yours sincerely
